

COMPANY OVERVIEW

GEOPlus' mission is to deliver quality service to our clients. We strive to first understand our clients needs, desires and definition of quality, then develop effective, economical and feasible solutions for their projects.

GEOPlus, Inc. is an employee-owned, multidisciplinary engineering consulting firm specializing in geotechnical, environmental, geologic, hydrogeologic, materials, and construction disciplines. Our firm was founded in 2005 in Shasta County, California by three registered professionals who have worked together for more than 12 years in Northern California and have more than 65 years combined experience in the consulting engineering business. Support staff includes engineering technicians and staff engineers/geologists.

The quality of an engineering consultant's services can be a major influence in the success or failure of a project. We carefully balance our field observations, laboratory testing and engineering analysis with construction costs and client requirements.

GEOPlus uses a team approach in our work including the owner, architect, civil and structural engineers, and contractor. We strive to provide technically sound solutions that are economically feasible and constructable.

GEOPlus' office and laboratory is located in the northern Sacramento Valley at Anderson, California. Our service area is primarily Northern California, Southern Oregon and Western Nevada; we also have experience in several other areas of the United States.

GEOPlus is:

Traver E. "Corky" Metcalf, Jr., PE, GE
Principal Geotechnical Engineer

William R. "Bill" Bergmann, PG, CHG
Principal Hydrogeologist

John L. Finnigsmier, PG, CEG
